### DETAILED ACTION

Claims 1-9 are pending.

#### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to compound of formula I wherein in formula II, both X<sup>1</sup> and X<sup>2</sup> are nitrogen, namely pyridazine, composition and method of use, classified in class 544, subclasses 224, 239, class 514 subclass 247.
- II. Claims 1-9, drawn to compound of formula I wherein in formula II, either X<sup>1</sup> or X<sup>2</sup> is nitrogen the other carbon namely isomeric pyridine, classified in class 546, subclass 297, class 514, subclass 313.

The inventions are distinct, each from the other because of the following reasons:

Inventions of group I and II are independent and distinct from each other because they are directed to dissimilar compounds with varying cores such pyridazine vs isomeric pyridine cores. Consequently, the groups have different classifications and require separate prior art searches. Art, which may render obvious or anticipate one of the groups would not necessarily do the same for the other group as evident from the references cited in the Information Disclosure Statement. Particularly, note Hall et al., which is competent prior art for benzenoid core is not applicable to Invention I and II unless applicants asserts equivalency of the above said ring systems. Each can support a patent, as the compounds of each group are capable of being utilized alone not in combination with other members listed in the Markush group.

In addition, it would be serious search burden to search all class and subclasses stated above. Additional search of other class and subclasses will be needed given the fact that B can also have Het substituents. With limited time available for each application, it would be serious search burden for examining each core group.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Should applicant traverse on the ground that the species of each group are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
